

PRANAV BANSAL

Site Reliability Engineer

98120 05737 | okpranavbansal@gmail.com | [LinkedIn](#) | [GitHub](#)

EDUCATION & CERTIFICATIONS

B.E. in Computer Science, Chitkara University

2021 – 2025 | CGPA: 9.77/10

AWS Certified Cloud Practitioner | Datadog Fundamentals | Kubernetes for Beginners

TECHNICAL SKILLS

- Core SRE: SLI/SLO Design, Error Budget Management, Incident Response, Blameless Postmortems, Toil Reduction, Capacity Planning
- Cloud & Infrastructure: AWS, GCP, Terraform, CloudFormation, Helm, Kustomize, Workload Identity, Cloud Armor, IAM
- AI/ML Ops: GCP Vertex AI (Model Garden, Agent Engine), Amazon Bedrock, Langfuse, LLM Observability
- Containers & CI/CD: Kubernetes (GKE, EKS), Docker, ECS Fargate, ArgoCD, Jenkins, GitLab CI, SOPS/KSOPS, git-crypt
- Observability: Prometheus, Grafana, Loki, Tempo, Datadog, Langfuse, New Relic
- Languages & Data: Python, Go, Bash, Java | PostgreSQL, Redis, MongoDB Atlas, ClickHouse, Neo4j, DynamoDB

EXPERIENCE

wyzard.ai (Nexura) — Agentic AI Platform

Gurugram

Continuous tenure since Jan 2024 (entity migration from Roundcircle Technologies)

Senior AI Platform Engineer (Startup; ~35-person team)

Apr 2026 – Present

- Owns AWS → GCP migration execution across GKE runtime, Gateway API / Cloud Armor, Workload Identity, and ArgoCD delivery for Wyzard's agentic AI platform.
- Built automated quality checks for AI model outputs on GCP Vertex AI (Model Garden, Agent Engine) and configured observability dashboards using Datadog and Langfuse.

Engineer (DevOps / SRE)

Nov 2025 – Mar 2026

- Served as the primary platform engineer, co-architecting AWS → GCP migration plans (ECS Fargate → GKE) with founders to scale AI model-serving infrastructure.
- Automated secrets decryption at deployment time using Mozilla SOPS and Kustomize (KSOPS), establishing ArgoCD GitOps pipelines that cut manual deployment steps by 40%.

Roundcircle Technologies — Key Projects: ASTRA (OLX Indonesia) & Wyzard.ai

Gurugram

Engineer (DevOps / SRE)

Jun 2025 – Oct 2025

- ASTRA (OLX Indonesia): Supported team observability migration (New Relic → Datadog/Loki) for 80+ microservices (9M+ MAU) and refactored core Terraform IaC codebases.
- Wyzard.ai: Built Jenkins CI/CD pipelines with auto-scaling ECS runners and git-crypt/S3-backed ECS secrets storage; deployed LGTM observability, reducing deployment failures by 30%.
- Wyzard.ai: Executed seamless AWS cross-account migrations during entity spin-off, re-architecting IAM trust policies and VPC peering with zero downtime.
- Wyzard.ai: Reduced AWS/ECS infrastructure spend by 50–60% via Spot strategy and RDS tuning; managed production databases (DynamoDB, MongoDB Atlas) and analytics engines (ClickHouse, Neo4j).

Engineer Intern (Converted to Full-Time)

Jan 2024 – May 2025

- Provisioned baseline cloud environments across dev, staging, and production using Terraform, establishing IaC standards that eliminated environment parity drift.
- Containerized 5+ monolithic legacy applications with Docker, integrating them into automated GitLab CI pipelines and cutting release cycles from days to hours.
- Authored 10+ runbooks and SOPs for incident response, reducing new-hire on-call ramp-up time and onboarding toil.

PROJECTS & ACHIEVEMENTS

- AWS → GCP Migration Playbook: Authored a comprehensive migration guide covering ECS→GKE workload migration, IAM-to-Workload-Identity mapping, and VPC networking rebuild.
- Hackathon 2025 (Runner Up): Built a real-time analytics platform using Kafka, Apache Pinot, and Superset.
- Hackathon 2023 (Finalist): Developed a face-recognition system using Python.
